Discretization
in Geometry
and Dynamics

CRC "Discretization in Geometry and
Dynamics" presents

The Discrete Charm of Geometry

- A team of mathematicians is working together on a big project -

A film by Ekaterina Eremenko

"Each shot shows beauty or truth, or even both of them. A combination that we know from mathematics."

- Andrew Okounkov, Fields Medal 2006

"A perfect film about mathematics. The story is told in an impressionistic way and that works perfectly. The dabs of colour, the images alone would not explain anything, but together they form a wonderful world. The world of mathematics."

- Public TV in Russia

"The film gives a glimpse into how mathematicians work. It is very worthwhile."

- Louis Nirenberg, Abel Prize 2015

"With striking images, some mathematical humor, a little drama, and a nice puzzle, this is again a very charming movie from director Ekaterina Eremenko."

- John Rognes, Chairman of the Abel Committee

"Mathematics was a horror to me at school, but to my surprise I couldn't turn away from the screen."

- Lev Novozhenov, writer

"Fantastic film. Mathematicians, good looking, happy, intelligent. If you gave up a career in mathematics, it could be that you are green with envy afterwards."

- A viewer
